KAVAIN

kavain.com/kava-for-hemp-brands

Add kava to your line, without starting over.

Kavain is a kava manufacturer, not a reseller. We source noble kava from our own farms in Fiji and partner farms in Fiji and Vanuatu, pre-process it in our own facility at Pacific Harbour, and extract it through our international operations. We supply ingredient-grade kava to brands and manufacturers in the US, Australia, New Zealand and Europe, from water-soluble liquids and powders to concentrated oleoresin.

WHY KAVA

Hemp brands and manufacturers are increasingly looking for new relaxation products to sit alongside their existing lines. Kava — a traditional Pacific beverage, enjoyed for generations for its calm, social character — is a natural fit: it runs on the emulsion and dry-blend equipment you already have.

KAVAIN PRODUCTS, BUILT FOR YOUR LINE

Every format below starts as our solvent-free supercritical CO_2 oleoresin, extracted from double-peeled noble roots with the peelings discarded, for a noticeably cleaner product.

FORMAT	BEST FOR	HOW IT WORKS IN PRODUCTION
Nano Liquid translucent emulsion	RTD cans, shots, tinctures; drinks that must stay clear	Ready-to-dose: meters straight into the batch tank, no dispersion step.
Micro Liquid microencapsulated liquid	RTD cans and bottles, shots, larger-format drinks	Meters in as a stable dispersion. Two strengths; suits already-opaque drinks.
Nano Powder water-soluble powder	Drink-mix sticks, capsules, tablets, low-moisture edibles	Dry-blends into existing powder lines. US-made from Kavain oleoresin.
Micro Powder† cyclodextrin powder	Dry blends, drink-mix sticks, capsules	Same dry-side handling as Nano Powder, on a cyclodextrin carrier.
Oleoresin† concentrated extract	Gummies, chocolates and edibles; your own emulsification	Highest concentration. Blends into the edible mass with your carrier; you control the final format.

Nano or micro? Same CO_2 oleoresin in both.

Nano — around 100 nm, a true emulsion: stays translucent, will not separate. Higher bioavailability; quicker, sharper onset.

Micro — 100 to 1,000 nm, microencapsulated: a stable, cloudy dispersion. Absorbs more gradually; slower onset, longer duration.

WHY KAVAIN

Own and partner farms in Fiji and Vanuatu
Double-peeled roots, peelings discarded.

Our own facility at Pacific Harbour, Fiji
Processed by Kavain, not a reseller.

Lab-tested, COA with every batch
Kavalactone COA per batch; full panel on request.

Samples ship from US stock
Dispatched within 5 business days; no customs wait.†

FROM FIRST CALL TO SHELF

1. **Technical call**
   20 minutes on your product, format choice and inclusion rates.
2. **Sample kit**
   Formats matched on the call, from US stock in 5 business days.†
3. **Pilot order**
   Start from 1kg; liquids from 5L.
4. **Scale up**
   Volume tiers and recurring supply as your line grows.

Regulatory note. Kava's regulatory status varies by product type and state.

† Nano Liquid, Micro Liquid and Nano Powder are held in US stock. Micro Powder and Oleoresin ship from US stock when available, otherwise from our overseas facility; we confirm timing with every request.

Start with a 20-minute technical call

On the call we match two to three formats to your product. Where there's a fit, we ship a free sample kit with spec sheets and COAs from US stock within 5 business days.
